

Class I2: Redlines and Handing-off

This class examines what is needed to hand-off a design for implementation.

Design & process concepts

- Redlining
- Handing-off designs

Homework due next week:

- *Assignment 12.1: Redline your menu page
- *Assignment 12.2: Build the menu page
- Work on your project 2

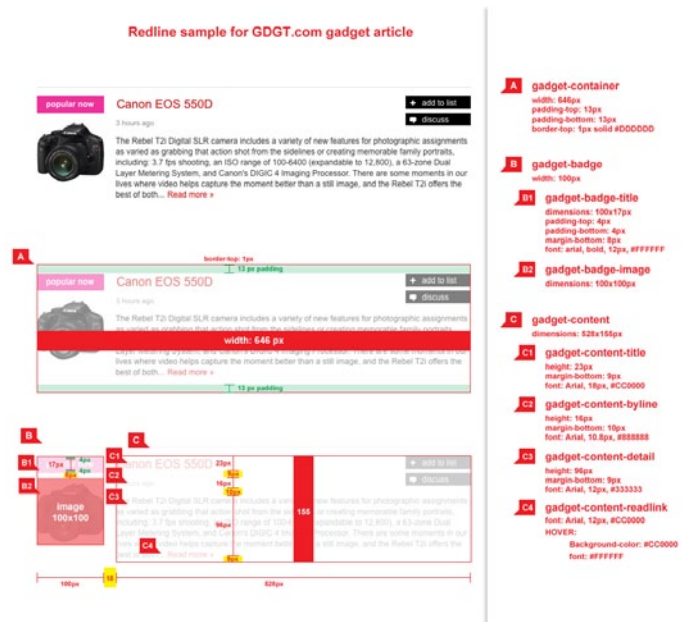

Reminders:

- Project 2 due in 2 weeks!
- Review Project 2 requirements

Redlines

Redlining offers pixel-by-pixel measurement of elements on a page for implementation by a web-developer.

- All items should have measured widths.
- Show margin and padding between elements
- Show font-family, size, and colors for text and links

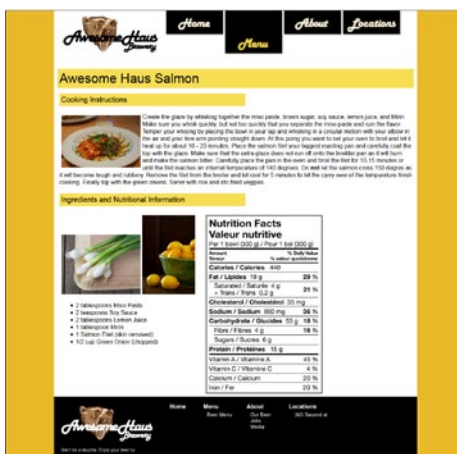

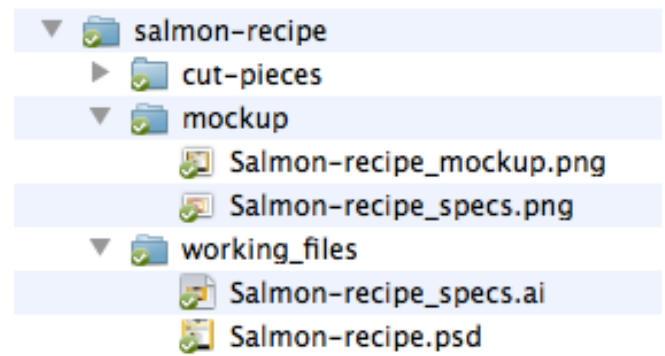

Handing-off

When handing off a design to a web developer, you should provide them with 3 pieces of key info:

1. Mockup (What it should look like complete)
2. Specs (The redline)
3. Cut-pieces (The images which can't be created in HTML/CSS)

Archiving

It's often helpful to create folders to archive your work:

Mockup

Specs

Cut-pieces
